Sample collection instructions are on our website: www.uomaeearthcare.fi/analyysit-soil-food-web-analyses

Results include a report, with the fungal-to-bacterial (F:B) ratio, biomass or individual amounts for the different organism groups and standard deviation for the observations.

In addition to quantities, a description on organism diversity and potential to cycle nutrients is provided.

If applicable, the quantities of organisms are compared to reference values for the successional phase of the plant desired or present. The report also includes a few photos.

Sample ID	Sample type (soil/ compost/potting soil/liquid)	Plants present	Desired plants

Include this form in your shipping package.

Note: Assessing samples is a time-consuming process. Hence three samples a day is the maximum I can promise. If you wish to send more than three samples, if possible, send three one day and the rest the next day. This way the biology of the samples stays as representative as possible. You don't need to fill this order form again for the second package. However, please include a paper with your name so I know who the package is from. If you have questions, be in touch.

Send your sample and this order form as an express letter to
Uoma Earthcare
Lehmustontie 44
01450 Vantaa

Prices: 99€ / sample when 1-3 samples
94€ / sample when 4-6 samples
